Phase 9: Reporting, Dashboards & Security Review – MAX FIT App

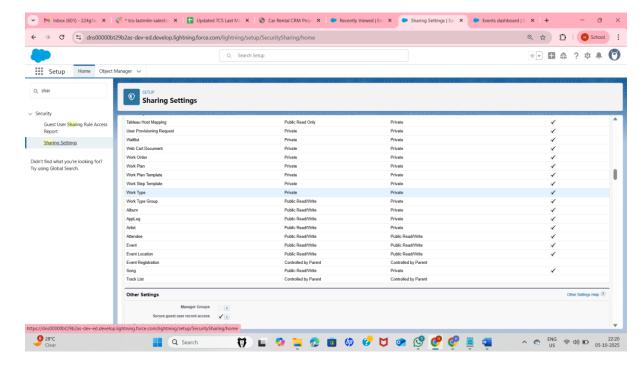

• **Reports:** Developed comprehensive reports to track key fitness event metrics such as session attendance rates, participant trends, and resource utilization. These reports help organizers monitor class popularity, capacity, and feedback efficiently.

- Custom Report Types: Created custom report types tailored to MAX FIT data, enabling
 cross-object reporting between events, registrations, and attendees. This supports detailed
 insights necessary for operational decision-making.
- Dashboards: Designed dynamic dashboards displaying real-time event summaries, attendance heatmaps, and registration forecasts. Dashboards empower managers and organizers to quickly visualize program health and adjust offerings accordingly.

- Dynamic Dashboards: Implemented personalized dashboards allowing event organizers and attendees to see data relevant to their roles and preferences, improving engagement and decision-making.
- **Security Review:** Conducted thorough reviews of sharing settings, field-level security, session timeout policies, IP whitelisting, and audit logs to ensure MAX FIT data is protected while enabling legitimate access for users.

This ensures MAX FIT delivers actionable insights to stakeholders while safeguarding sensitive fitness event data effectively.
